Appl. No. 10/768,271 Amdt. Dated July 26, 2006 Reply to Office Action of January 10, 2006

## Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

## Listing of Claims:

Claim 1 (previously amended): A surface light source unit comprising:

- a plurality of light sources for emitting light beams; and
- a light guide plate for transmitting the light beams, comprising:
- a light incidence surface for receiving the light beams;
- an emission surface adjacent to the light incidence surface for emitting the light beams;
  - a bottom surface opposite to the emission surface; and
- a plurality of diffusion dots formed on the bottom surface for scattering the light beams;

wherein a plurality of substantially triangular scatter enhancing regions is defined on the bottom surface adjacent to the light sources, and sizes of the diffusion dots in the scatter enhancing regions are larger than those of the diffusion dots in a remaining region of the bottom surface adjacent to the scatter enhancing regions.

Claim 2 (original): The surface light source unit as claimed in claim 1, wherein the diffusion dots are arranged generally uniformly on the bottom surface.

Appl. No. 10/768,271 Amdt. Dated July 26, 2006 Reply to Office Action of January 10, 2006

Claim 3 (original): The surface light source unit as claimed in claim 1, wherein one side of each of the scatter enhancing regions is adjacent to the light incidence surface.

Claim 4 (original): The surface light source unit as claimed in claim 1, wherein the sizes of the diffusion dots in the remaining region of the bottom surface increase with increasing distance away from the light incident surface.

Claim 5 (original): The surface light source unit as claimed in claim 1, wherein a distribution density of the diffusion dots in the scatter enhancing regions is in the range from 50% to 90%.

Claim 6 (original): The surface light source unit as claimed in claim 1, wherein a distribution density of the diffusion dots in the remaining region of the bottom surface is in the range from 3% to 85%.

Claim 7 (original): The surface light source unit as claimed in claim 1, wherein the light guide plate is rectangular.

Claim 8 (original): The surface light source unit as claimed in claim 1, wherein the light guide plate is wedge-shaped.

Claim 9 (original): The surface light source unit as claimed in claim 1, wherein the light guide plate is made of polymethyl methacrylate (PMMA).

Claim 10 (original): The surface light source unit as claimed in claim 1, wherein the light source is a point light source.

Appl. No. 10/768,271 Amdt. Dated July 26, 2006

Reply to Office Action of January 10, 2006

Claim 11 (original): The surface light source unit as claimed in claim 1,

wherein each of the light sources is a light emitting diode (LED).

Claim 12 (original): The surface light source unit as claimed in claim 1,

further comprising a reflective plate disposed on the bottom surface of the

light guide plate.

Claim 13 (original): The surface light source unit as claimed in claim 1,

further comprising a diffusing plate disposed on the emission surface of the

light guide plate.

Claim 14 (original): The surface light source unit as claimed in claim 1,

further comprises a prism plate disposed on the emission surface of the light

guide plate.

Claim 15 (previously amended): The surface light source unit as

claimed in claim 1, wherein a distribution density of the diffusion dots in the

scatter enhancing regions is greater than a distribution density of the

diffusion dots in a remaining region on the bottom surface adjacent to the

scattering enhancing regions.

Claims 16-22 (canceled).

Claim 23 (canceled).
